

ABSTRACT

Power tools, such as, saws and circular saws, and methods. In some constructions and in some aspects, a saw includes a housing, a motor, a cover, and a quick-locking member operable to releasably lock the cover to the housing without tools. In some
5 constructions and in some aspects, a saw includes a housing, a motor, a first cover connected to the housing, the first cover at least partially covering a saw blade, and a second cover selectively connectable to the housing, the second cover at least partially covering the first cover and at least partially covering the saw blade. In some constructions and in some aspects, a method of disassembling a saw including moving a
10 locking member from a first position to a second position without the use of tools, and removing a cover from a housing to at least partially uncover the saw blade.
